

An innovative shooting station design to maximise space in a gymnasium at a cost effective price.

The Essentials Column Mount system easily clamps onto a vertical I beam in any building and provides an instant solution for practice shots.

- + Featuring an fibreglass fan shaped backboard
- + Standard institutional goal
- + Can be set at different heights as required
- + Adjustable to cope with minor angles in the member it attaches to
- + Worm drive height adjustment is available on request

This system is **not designed for slam dunking**, and it is strongly suggested that safety padding is installed on the beam when the structure is in use.
