

The ultimate convenience for Volleyball facilities. Eliminate the need to set and strike posts with the roof mounted Skymaster Volleyball system.

Hinging from the roof, this system deploys or retracts and eliminates the need for manual handling. The net and referee stands are permanently in place, and lower into place at the turn of a key or push of a button.

This system is ideal for facilities with limited staff to set up and take down posts. It saves on storage space, and the risk of equipment being dropped on the floor causing damage.

Systems are custom made to suit specific venues, and engineered to suit each project.
